21:33:00	155
21:25:00	155
21:58:00	187

Time-Path Diagram

The waiting time I can identify when I take the departure time minus the arrival time.

The station with the longest waiting time is Stuttgart Hbf.

The slope between two stations tells me the measure of how steep it between the stations and it also represent the relationship between two variables of x and y axe.
